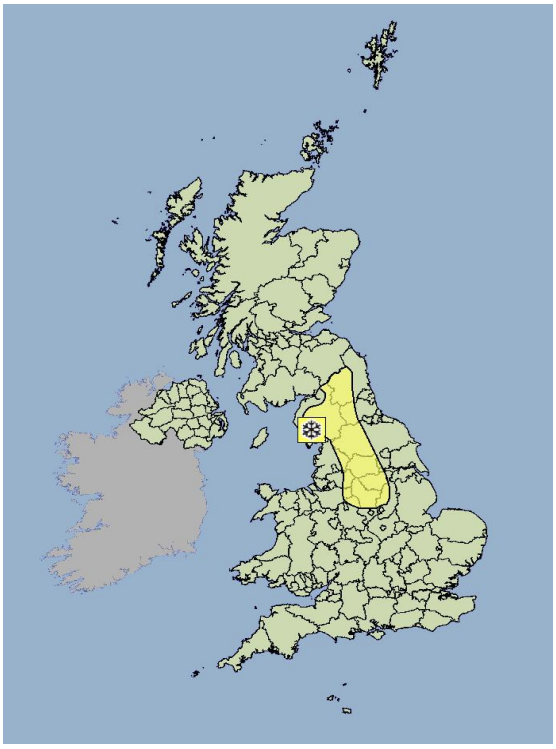
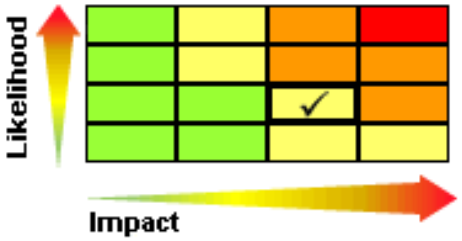
National Severe Weather Warning Service





Chief Forecasters Assessment
As a weather system moves in from the south and comes up against cold air over the UK, rain will turn to heavy snow, mainly on high ground. 5-10 cm of snow is expected to accumulate in places, mainly above 350 m, with a smaller chance of 2-5 cm accumulating below this, above 250 m. There is also the possibility of a couple of cm of wet snow gather locally at lower levels for a time, before snow turns back to rain. Strong winds are also expected which will likely lead to some drifting of snow on the high ground.

The snow is likely to be affecting southern parts of the warning area in the early hours of Monday spreading to all parts later on Monday morning. Snow is likely to gradually turn to rain even on the highest ground, on Monday afternoon in the southern Pennines.

At present there is still some uncertainty in exact snow levels.
This warning has been updated to confine the risk of medium impacts to northern England. A separate low impact snow warning has been issued for parts of Scotland.

The Met Office have issued a **Yellow Warning** of **Snow**

Valid from **03:00 on Mon, 02nd Apr 2018** until **23:59 on Mon, 02nd Apr 2018**

Headline: Heavy snow is expected over parts of northern England, especially for high ground.
What To Expect: There is a chance of travel delays on roads with some stranded vehicles and passengers, along with delayed or cancelled rail and air travel.
There is a small chance that some rural communities could become cut off.
